## HOW STOCK STOPS CATCHING YOU OUT

The warning window is yours to set — 14, 30, 60 days...

Phial alerts your team here — weeks before anything reaches the bin

**£300m**

of medicines wasted in the NHS every year (est.)

**36**

items in one real emergency-bag log — every date once watched by hand

**2–8°C**

a safe range per fridge, up to six readings a day

**Seconds**

to log a delivery — from any phone or computer

## HOW IT WORKS Three simple steps

### 1 Record stock as it arrives

Product, batch, expiry, location — seconds per item, from any device.

### 2 Do a quick weekly check

A guided count against what Phial expects — variances corrected and recorded.

### 3 Reminders come to you

Emails and alerts reach the right person before anything expires or runs low.

## FEATURES Everything a practice needs — nothing it doesn't

### Expiry traffic lights

In date, expiring soon or expired — with a warning window you choose.

### Fridge temperature logs

Reminders when readings are due; instant alerts for breaches.

### Reorder email digests

One email a day at most, to whoever owns that location.

### Guided weekly checks

Count shelf vs screen — every variance recorded and named.

### Tamper-proof audit trail

Receipts, use, corrections, disposals — permanent, timestamped.

### Every location, one account

Fridges, cupboards, bags, branch sites — one shared picture.

## WHY PHIAL Retire the spreadsheet

| EmergencyBag_FINAL_v7.xlsx                                                                                            |              |              |              |
|-----------------------------------------------------------------------------------------------------------------------|--------------|--------------|--------------|
| MEDICATION                                                                                                            | NOV          | DEC          | JAN          |
| Adrenaline 1:1000 1ml                                                                                                 | (10) 31/7/25 | (10) 31/7/25 | (10) 31/7/25 |
| Adrenaline 150mcg pens                                                                                                | 2 × 31/3/24  | 16/11/213    | 2 × 31/3/24  |
| GTN spray                                                                                                             | 31/10/26     | 10/01/26 ?   | X            |
| Diazepam 10mg/2ml inj                                                                                                 | (10) 30/4/25 | 0            | 0            |
| One real bag log: 36 items × 19 checks = 578 hand-typed entries — typos included. And the file never reminded anyone. |              |              |              |

### Why practices switch

- ✓ **Typed once, watched forever** — every date monitored from the moment it's logged.
- ✓ **Reminders arrive by themselves** — no one has to remember to open a file.
- ✓ **Numbers that can't drift** — quantities calculated from every movement, reconciled weekly.
- ✓ **The whole team, any device** — no per-user charges, no file stuck on one computer.

Purpose-built for practices — not a per-user generic inventory app, and not a hospital procurement suite you'll never fully use.

## Ready for inspection day

When the CQC — or the RCVS assessor — asks how you manage stock, the answer is on the screen.

- ✓ Permanent, tamper-proof movement history for every batch
- ✓ Weekly reconciliation records with named checkers
- ✓ Dated temperature logs for every fridge, breaches flagged
- ✓ Expiry and disposal evidence, exportable when asked

★ Launch offer — join before 1 December 2026

£500 **£350** /year per practice  
+ each branch site **£50/year** ~~£150~~

✉ hello@phial.health **Book a trial**

## NEW IN PHIAL

# Know your run rate — order just in time

Phial learns how much your team actually gets through each week — product by product — and turns it into ordering you don't have to think about.

- ✓ **A run rate for every product**, learned from your first month of data
- ✓ **A weekly order sheet** with suggested quantities, sorted by what needs ordering first
- ✓ **Weeks of cover at a glance** — see what will run out before it does
- ✓ **Plain-English advice** — "a fortnightly order of around 61 keeps four weeks of cover"

The Rhythm view — your weekly flow and the 4-week average, with your first month shaded while Phial builds its baseline.

3 lines need ordering this week to keep every product at 4 weeks of cover.

Target cover: 4 weeks

Sort: Rate of ordering

18 products are hidden because they were last ordered more than 3 months ago. Widen the "Ordered in" filter to include them.

| PRODUCT                                                                          | WEEKLY USE | ON HAND | UNIT PRICE | COVER   | SUGGESTED ORDER                    |
|----------------------------------------------------------------------------------|------------|---------|------------|---------|------------------------------------|
| <b>Infanrix Hexa 6 in 1</b> 0.5ml injection<br><small>Vaccination Fridge</small> | 5/wk       | 11      | —          | 2.2 wks | <b>Order 9</b><br>restores 4 weeks |
